

- Impact-resistant with built-in seat
- Concealed through-wall services and fixings
- Attractive domestic appearance
- Easily renewable surface
- Seamless design for extra strength and easy cleaning
- Standard 427mm Height

Manufactured from a highly durable, polished solid surface material, this WC offers excellent resistance to impact, scratching, and staining. The surface can also be easily refurbished on-site, restoring it to its original finish and extending the product's service life.

Although not quite as indestructible as stainless steel, the solid surface provides a softer, more domestic appearance, avoiding the cold, institutional feel often associated with stainless steel toilets.

The integrated moulded seat is available in white, grey, or blue and eliminates the common issue of damaged or missing toilet seats. It remains comfortable and practical, with the solid surface material naturally warmer to the touch than ceramic or stainless steel alternatives.

Product Specification:
